CONFIDENTIAL SECURITY DOCUMENT

Social Engineering Assessment Report

Example Corp — Phishing Simulation Campaign

Phishing / pretexting simulation

Document Type	Social engineering campaign results and analysis
Campaign Type	[FILL: e.g. Email phishing simulation]
Target Population	[FILL: N employees across M departments]
Assessment Date	1 January 2030
Click Rate	[FILL: n%]
Classification	**Confidential — Restricted Distribution**

Distribution: This document identifies aggregate/department-level results only and must not be used for individual disciplinary action; it must not be shared outside authorised personnel responsible for the security awareness programme.

Scope of analysis: [FILL: One or two sentences on the campaign's authorisation and ethical guardrails, e.g. "conducted with HR and Legal sign-off; no real credentials were captured/stored beyond a hashed identifier for scoring."]

2 Executive Summary

Overview

A social engineering campaign was conducted against Example Corp — Phishing Simulation Campaign to measure susceptibility to phishing and pretexting, and to identify departments/roles that would most benefit from targeted awareness training.

[FILL: One or two sentences on the overall outcome, e.g. "18% of recipients clicked the simulated phishing link, and 6% submitted credentials into the fake login page."]

CRITICAL — Key Takeaway

Result — [FILL: one-line verdict].

Headline conclusions:

- [FILL: Headline finding 1, e.g. "the Finance department had the highest click rate at 31%"]
- [FILL: Headline finding 2, e.g. "only 4% of recipients reported the email to IT/security"]

Headline Metrics

Metric	Value	Benchmark
Emails delivered	[FILL: N]	—
Open rate	[FILL: n%]	[FILL: industry benchmark, if known]
Click rate	[FILL: n%]	[FILL: industry benchmark]
Credential submission rate	[FILL: n%]	[FILL: industry benchmark]
Report rate (to IT/security)	[FILL: n%]	[FILL: industry benchmark]

3 Campaign Methodology

Pretext(s) Used

Pretext	Description
[FILL: e.g. "IT password expiry notice"]	[FILL: Description of the lure and why it was chosen]
[FILL: e.g. "HR benefits enrollment"]	[FILL: Description]

Rules of Engagement & Ethics

- Sign-off obtained from: [FILL: HR, Legal, executive sponsor].
- Data handling: [FILL: e.g. submitted credentials were never stored in plaintext / were discarded immediately after logging a boolean "submitted" event.]
- Individual results: [FILL: e.g. reported at department level only, not by named individual, to avoid punitive use.]

Delivery & Tracking

[FILL: Describe the platform used (e.g. GoPhish or a commercial equivalent), how opens/clicks were tracked (tracking pixel, unique link per recipient), and the campaign window.]

4 Campaign Results

Results by Department

Department	Sent	Clicked	Submitted	Reported
[FILL: Finance]	[FILL: n]	[FILL: n%]	[FILL: n%]	[FILL: n%]
[FILL: Engineering]	[FILL: n]	[FILL: n%]	[FILL: n%]	[FILL: n%]
[FILL: Sales]	[FILL: n]	[FILL: n%]	[FILL: n%]	[FILL: n%]

Time-to-Click Distribution

[FILL: Optional: note how quickly recipients clicked after delivery (e.g. "50% of clicks happened within the first 10 minutes"), which is useful for tuning detection/response SLAs.]

5 Notable Observations

- [FILL: e.g. Several recipients forwarded the phishing email to colleagues, amplifying exposure.]
- [FILL: e.g. The secure email gateway did not flag the simulated email despite a spoofed sender domain.]
- [FILL: e.g. IT helpdesk received several calls asking whether the email was legitimate - a positive signal.]

6 Recommendations

Priority	Recommendation
Immediate	[FILL: e.g. targeted refresher training for the highest-click-rate department]
Short-term	[FILL: e.g. add a one-click "report phishing" button to the email client]
Long-term	[FILL: e.g. run quarterly campaigns and track click-rate trend over time]

7 Appendix A — Sample Email(s) Used

[FILL: Attach or reference a screenshot/copy of the pretext email(s) used, redacted of any real recipient names.]

8 Appendix B — Tools Used

- [FILL: e.g. GoPhish, King Phisher, a commercial security-awareness platform]
